

VaultEdge

Reliable security. Protecting what matters.

VAULTEGE BUSINESS PLAN

The private security sector dates back to the **mid-1800s**, with one of the earliest examples being the **Pinkerton National Detective Agency**, established in **Chicago, USA**. Their goal was to protect train operators and cargo from robbery—marking the beginning of an industry focused on protection and prevention..

What is the security industry?

The security industry encompasses all organizations—both public and private—that provide security-related services and products. These include protecting people, assets, data, and property from threats such as theft, crime, and even natural disasters. At its core, the purpose of the security industry is to safeguard individuals and communities from physical harm and loss.

The core function of security is to safeguard people from physical threats that cost the community dearly.

In South Africa, the need for security is **urgent and widespread**. Homes are targeted daily, and many lack the systems necessary for monitoring and protection. Individuals are also at risk—driven by socio-economic factors such as **unemployment, lack of education, poverty, and illness**. While these conditions don't excuse crime, they certainly affect communities, making protection not just necessary, but vital.

According to [Macrotrends](#), **South Africa's crime rate per 100,000 people in 2021 was 41.87%—a 23.36% increase from 2020**. These numbers are **alarming**, demonstrating just how pressing the demand for reliable security has become. Security is not a temporary need—it is a **24/7, 365-day responsibility**.

We have founded VaultEdge to meet that need. We are an innovative and inclusive company with one mission, and that is:

To bring peace of mind and protect what matters most.

Our vision at VaultEdge is to expand our services across the country, to become reliable, responsible and caring partners, offer affordable solutions for all demographics and geographics and be a voice for integrity, accountability and customer first service.

Our goal is to **bridge the gap between underserved communities and professional security services**, offering access to **affordable, trustworthy, and people-centered** protection. We don't just serve—we care.

Our core values consist of integrity, we believe in actions over words. It is utmost important that we are reliable and show up for our customers every time. We implement inclusivity ensuring that no one is left behind, and the community as we believe are one.

Our team is driven by **personal experience**. One of our founders once called a well-known security company when a fire broke out in a backyard flat. The situation was critical. Despite being on an emergency speed dial plan, **no one showed up**. The fire could have destroyed the home—and lives were at risk. That family had to fight the fire themselves. They were paying for peace of mind, and got nothing in return.

That moment is the **reason VaultEdge was born**. We believe no one should be left alone when safety is on the line.

Security is a basic human right yet many go without it.

VaultEdge Business Model

At VaultEdge, we have decided that our business model would be B2B and B2C. We chose B2B in order to collaborate with reputable companies and promote our services within the company and outside of the company. Our target audience would be government entities and small businesses, not the individuals. This can increase sales as orders can be made in bulk and tailored to the buyers needs. Our deals will be formal and contract-based to ensure long-term and sustainable relationships between our customers.

Our additional business model, being B2C, will cater to households and individuals, excluding businesses. Our target market would consist of individuals that desire personal safety.

B2B:

- Aiming to work with reputable companies to supply new buildings with security measures as soon as they are built.
- Supply and offering CCTV installations, alarm systems and errors.
- Monitoring surveillance systems.

B2C:

- Catering to home alarm systems installation.
- Panic buttons/emergency contact
- Home security consultations.
- 24/7 alarm responses services

VaultEdge Revenue Strategy

Our business models will generate revenue for us. B2B generates revenue through contracts - in long term service agreements, subscriptions and value added services. Our service contracts include alarm monitoring, armed response, and access control which can be our core revenue as they need constant upgrading, and customisable

packages to cater for each of our customers' needs. These services do remote controlling of alarm systems whereby customers can pay for a monthly amount. These will be scalable, adding more customers to generate more revenue.

Our subscription service is ideal for our e-commerce website, offering a wide range of services such as CCTV cloud storage of a monthly storage of camera footage off-site. Mobile panic app personalised for the employees with direct contact daily, perfect for emergency circumstances and system maintenance for constant updates keeping the application running and ready. It will be monthly, incurring monthly revenues.

Our installation procedures are once-off and cater to alarm systems, installing hardware systems depending on the complexity. CCTV installations of wiring systems and control systems ranging, giving us an opportunity to upsell our services.

We also offer specialised consultations and risk assessments at a fee, billed hourly or per project. Our custom package deals are at a high lifetime value, catered for all customers with a stronger built relationship.

1. Service Contracts - core revenue

- Revenue frequency : monthly
- Contract terms : 6-24 months
- Scalable to add more clients

2. Subscription based services - recurring revenue

- Revenue frequency : monthly

3. One time equipment setup - once off installation fees.

- Revenue frequency : once off
- An opportunity to upsell for long-term contracts

4. Consultations and risk assessments - project based

- Revenue frequency : once off

VaultEdge Marketing Strategy

As a startup company in the South African security industry, VaultEdge will focus on building brand awareness , trust and strong relationships with businesses that face frequent security risks We plan to focus our efforts on industries with consistent, high-risk security needs and look into small-to-medium businesses such as logistics , retail operators, warehouses and construction companies and institutions. We will differentiate ourselves through a people-first approach, combining human presence with modern technology CCTV monitoring, panic systems and mobile response. Our promise is reliability, inclusivity and transparent pricing with no hidden fees.

In our early stages, our marketing efforts will rely heavily on low-cost , high impact channels. This includes direct outreach such as cold calls, door-to-door visits to local businesses and free-on site security assessments to demonstrate value upfront. We will also build a strong LinkedIn presence, posting practical security tips, crime statistics and success stories to position VaultEdge as a trusted voice in business security.

Our website will act as a lead-generation tool, optimised in catering for our potential clients' needs. Since budget is limited in the startup phase, we encourage word-of-mouth referrals by offering discounts or incentives to businesses that refer us to new clients. This approach will help us grow quickly in local communities before expanding across the nation.

Our pricing will be flexible to attract new adopters with tiered service packages and discounts for long-term contracts. This allows businesses to start small with us and upgrade as their needs grow. To ensure a continuous strong relationship with our clients, VaultEdge will provide monthly security reports and maintain consistent communication to prove our credibility.

In summary, VaultEdge's startup marketing strategy is built on direct outreach, digital presence, partnerships, and referrals, ensuring steady growth while keeping costs manageable. Our focus is to earn trust, deliver exceptional service, and expand our footprint steadily across South Africa.

VaultEdge Market Opportunity and Feasibility

- Market Opportunity

The market opportunity for VaultEdge in South Africa is very strong because the country continues to face some of the highest crime rates in the world. Businesses and homes see security as a need, not a luxury therefore making it a recession resistant industry.

The private security industry in South Africa is already one of the largest globally, with over 9,000 registered companies and more than 500,000 active security officers. The sector is estimated to be worth between R50 and R60 billion annually, according to [BusinessTech](#) in May 2024. Despite this, many existing providers fail to deliver reliable and transparent services. Customers often complain about poor response times, hidden fees, and a lack of integration between technology and human presence.

The security industry has a large B2B client base. There are thousands of businesses that require ongoing and reliable protection.

A growing residential demand , where home invasions and burglaries drive strong B2C demands, especially in middle-income and high-income households. Many households are unhappy with current service providers (delays, unreliability), creating a gap for new entrants like VaultEdge.

- Feasibility

The feasibility of VaultEdge lies in its ability to start small and scale strategically. By focusing first on niche markets such as construction sites, gated communities, and residential areas, the company can avoid competing directly with industry giants in the early stages. VaultEdge's emphasis on reliability and inclusivity gives it a competitive advantage, while the integration of technology—such as panic apps, AI-enhanced CCTV systems, and real-time monitoring—will differentiate it from traditional security firms.

As a startup, we do accept challenges and we are aware that they do exist.

Challenges such as high startup costs for vehicles, equipment and training as well as licenses. This goes along with high competition from established brands such as ADT, Fidelity and G4S. However, we can overcome these challenges through strong community engagement, transparent pricing models, and partnerships with insurers and technology providers.

In conclusion, the market opportunity for VaultEdge is substantial, and the business is feasible if it enters strategically, builds a strong brand reputation, and consistently delivers on its promise of reliability and care. By addressing the current gaps in the industry, VaultEdge has the potential to secure a profitable share of the multi-billion rand security market while making a positive impact on South African communities.

VaultEdge Competition

VaultEdge operates in a highly competitive industry where major players such as ADT Fidelity, G4S, and Chubb dominate the South African security market. These companies are well-established, with large workforces, brand recognition, and resources to cover wide geographic areas. However, despite their size, they often face criticism from customers regarding poor response times, unreliable service delivery, and impersonal customer support. Many clients also complain about paying monthly subscriptions without receiving consistent value or transparency.

Smaller local security providers also exist, focusing on specific neighborhoods or business sectors. While they may be more affordable, they often lack the advanced technology, training, and resources required to guarantee consistent service, leaving gaps in their ability to compete with larger firms.

VaultEdge plans to differentiate itself by focusing on reliability, transparency, and inclusivity. Unlike many competitors, we will combine a human presence with technology-driven solutions such as panic apps, CCTV monitoring, and real-time reporting. We will position ourselves as a trustworthy and responsive partner, offering clear service-level agreements and honest communication with clients. Our

customer-first approach ensures that businesses and households receive the protection they pay for without hidden costs or unfulfilled promises.

As VaultEdge, we emphasise community integration by working closely with local businesses and residents. This creates long-term trust and while competitors treat their clients as numbers, we treat them as family. Building long-term relationships through check-ins, customised packages and detailed monthly reports.

VaultEdge Payment Options

For VaultEdge, the most suitable payment options will be designed to provide flexibility and convenience for both businesses (B2B) and households (B2C). A subscription-based model will be the primary option, where clients pay a fixed monthly fee for continuous security coverage. This ensures predictable income for the company while allowing customers to budget for their safety needs without unexpected costs.

In addition to subscriptions, once-off payments will be available for specific products and installations such as CCTV cameras, panic buttons, alarm systems, and access control devices. This allows customers to invest in physical security infrastructure upfront while still benefiting from VaultEdge's monitoring or response services on a monthly basis.

For business clients, contract-based billing will be offered, with quarterly or annual payment options. This not only helps businesses manage cash flow but also secures long-term partnerships for VaultEdge. Flexible invoicing terms, such as payment on 30 or 60 days, can also be negotiated depending on the client's size and creditworthiness.

To enhance customer convenience, VaultEdge will accept multiple payment methods including debit orders, EFT (electronic funds transfer), credit and debit cards, and secure online payment gateways. Mobile payment solutions such as Visa, Capitec Pay, Payshap, Absa Pay, Snapcan can also be integrated to cater to South Africa's growing trend of digital transactions. For corporate clients, EFT and direct invoicing will likely be the most common, while residential clients may prefer card payments or debit orders for ease of use.

By offering a mix of subscription plans, once-off purchases, and flexible payment methods, VaultEdge will ensure accessibility for all demographics while maintaining steady revenue streams. This variety of options will also make our services more inclusive, giving customers the freedom to choose a payment plan that best fits their financial situation.
